

Handbook of pharmacology

By Charles Wilson Greene

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 136 pages. Dimensions: 9.7in. x 7.3in. x 0.3in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1914 edition. Excerpt: . . . would occur indirectly from the action of the drug on the circulation. The volume of the circulation through the kidney is often decreased by profound vasoconstriction in the acute stage, but in the general administration of digitalis the total efficiency of renal circulation is raised. Digitalis produces diuresis. This can be demonstrated on the normal animal, where diuresis is distinct though relatively slight. In pathological conditions, especially when involving the circulatory apparatus associated with dropsy and edema, this diuretic action is very greatly increased. The mechanism of diuresis by digitalis has been variously explained, by some authors as wholly vascular, by others as due to a direct influence of the drug on the renal epithelium. While one must admit the favorable vascular effects it seems that one cannot deny the direct renal stimulation. In relation to the clinical dropsical condition there is a disturbance of...
